Device Breakdown — By Impression and Clicks

Overall Conclusion

Over this period, Active campaigns drove real growth, Clicks +31%, Impressions +44%, Conversions +66%, but that growth came at rising cost:

Avg.CPC is up 18.7%, meaning each click is now more expensive than before.

Encouragingly, Cost per conversion still improved (-6.5%), so post-click performance is getting more efficient even as click costs rise.

A meaningful share of total clicks come through Performance Max campaigns, which don't report at the ad group or keyword level, so the breakdown tables on this dashboard reflect Search campaign activity specifically, not the full picture.

This isn't missing data, it's a structural limit of how PMax reports.

This dashboard currently covers Google Ads only. GA4 website-behavior data (including the conversion-name breakdown showing exactly which on-site actions are driving results) is still pending access, that section will be completed once available.
